Annexure I -Interview Questionnaire

1. Could you please talk a little bit about your work on the photo-documentation of heritage structures in West Bengal? (Short description of the types of structures, how old etc.)

2. What kind of data, do you think, is lacking in all your uploads and data work?

3. We have found out based on data extraction that exact location, coordinates etc. are missing for significant numbers of heritage structures. How do we understand why they are missing and what can be done to reduce them?

4. Have you identified any other data gaps in your work on heritage structures?

5. What could be other possible factors related to the missing data? (access to sites, technology, language, archival content, skills etc)

6. We have also found out that Wikidata lacks data about temples of West Bengal, although there have been 11 exploration projects in the last 3 years and thousands of photographs were uploaded to Wikimedia Commons. What do you think, is the reason for this lower conversion rate from images to data and how that can be increased?

7. Have you made any efforts to address some of these issues? Do you see any such efforts in other Wikiprojects?
