INDIA- EU FTA: A NOTE ON COPYRIGHT ISSUES

- Nehaa Chaudhari

Against the backdrop of ongoing negotiations dating back to 2007, and, more recently, with parties being unable to make substantial progress on the Indo-EU FTA\(^1\); this note presents an overview on some of the provisions of the FTA and the copyright issues identified therein. This note will deal with the issues on two levels- first to examine the impact of intellectual property right provisions in FTAs in general and second to apply these generic principles to the Indo- EU FTA specifically.

INTRODUCTION

Investment agreements, of which bilateral investment treaties are a part, and investment chapters in various Free Trade Agreements often result in an increase in the effective levels of intellectual property protection in one of the countries that is a part to the agreement. This can be done either explicitly, where ‘investment’ may be defined to include IP, or implicitly, for instance, through an expropriation provision.\(^2\) This has concurrently witnessed the growing realization that the promotion of these increased IP standards is not suited to the need of developing countries. Therefore, it has been observed\(^3\) that there is now an attempt by the developed countries to use FTAs as a forum to push for higher standards of IP protection in developing countries, and to restrict the scope of the flexibilities offered by TRIPS, most notably in the sectors of protection of plant varieties, patents and access to medicine, farmers rights and access to information.\(^4\) This approach is inherently problematic, because it then infringes on the developing countries’ ability to achieve their developmental objectives.

\(^1\) Hereafter referred to as the FTA.

Dismantling the Arguments in Favour of Increased IP Protection

A prevalent view of thought is that in order to increase Foreign Direct Investment (FDI), developing countries would have to increase their IP protection. This section of the paper seeks to argue that this might not necessarily be the case.

An illustration of the aforesaid proposition may be Heald’s criticism\(^5\) levied on Mansfield’s paper\(^6\) arguing that there was a direct correlation between the level of intellectual property protection in a country and the foreign direct investment into that country. Further, a study\(^7\) conducted under the aegis of the United Nations has suggested that there was a ‘considerable incentive’ for countries to use the flexibilities provided under TRIPS to maximise net benefits for their development; stating that while in countries with a capacity to innovate stronger IPR protection can reap some benefits in terms of greater innovation at home and a greater diffusion of technology, the same cannot be said about nations without such a capacity, and may in fact impose additional costs.\(^8\)

Specifically in the area of copyright, it has been observed that increased copyright protection can hamper the growth and development of knowledge based industries. Sanya Smith argues that those who control copyright have a ‘significant advantage’ in the knowledge based economy, and says that in the current scenario where ownership of copyright is largely in the hands of industrialized nations, this places developing nations, and smaller economies at a significant disadvantage.\(^9\) She also goes on to argue that increasing copyright protection alone does not seem to be sufficient to stimulate industries, and there may other factors involved. Additionally, copyright could also significantly increase the cost of creative industries.\(^10\) More fundamentally however, access to information and knowledge are amongst the most affected

areas as a result of tightening of copyright laws, leaving students, academicians, researchers, scientists and persons with print disability significantly disadvantaged.

**IMPLICATIONS OF THE COPYRIGHT PROVISIONS IN THE PROPOSED INDO-EU FTA**

Based on the general discussion earlier, this section of the paper seeks to examine the proposed and long debated Indo- EU FTA for the concerns enumerated earlier. As things currently stand, both parties have failed to reach a consensus on various substantial differences, and a ministerial meet originally scheduled for June seems unlikely to take place.\(^\text{11}\)

It has been observed\(^\text{12}\) that the Indo- EU FTA\(^\text{13}\) includes various provisions that preserve the flexibilities offered under the TRIPS framework. This is extremely critical from the perspective of developing countries, given that access to knowledge is an extremely important ideal to be preserved. For instance, as noted by *Knowledge Ecology International*\(^\text{14}\), the proposed FTA includes Articles 7 (Objectives) and 8 (Principles) of the TRIPS\(^\text{15}\) by reference. Further, the language of Article 13 under the proposed FTA explicitly recognizes the importance of the Doha Declaration, which is a positive step.\(^\text{16}\) It has been said however, that stronger language where the parties ‘affirmed’ their obligations under the Declaration could have been used.\(^\text{17}\) However, this does not take away from the fact that many of the provisions of the proposed FTA are extremely problematic, as will be discussed in the forthcoming parts of this paper.

**Problematic Provisions**

The main concern that has emerged from this FTA is the fact that some of its provisions dealing with IPR go beyond the mandate as under the TRIPS Agreement. For instance, as pointed out by Shamnaad Basheer to *Intellectual Property Watch*, various provisions now provide for intermediary liability, which isn’t present in TRIPS. He also adds however, that if the

\(^{16}\) Supra note 14.

\(^{17}\) Supra note 12.
initial stand of the government that India would not go TRIPS plus continues to hold, the government should indeed adopt a strong stance and not cave in to the said provisions.\(^ {18}\) An overview of some of the problematic provisions has been presented hereafter:

**International Obligations**

As per the proposed treaty, protection granted by the parties should be in accordance with the Berne Convention, the Rome Convention and the WIPO Copyright and Performance and Phonograms Treaties. Snehashish Ghosh in his blog post\(^ {19}\) writes that the *EU stipulates compliance with Articles 1 through 22 of the Rome Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organizations (1961), Articles 1 through 14 of the WIPO Copyright Treaty – WCT (Geneva, 1996), Articles 1 through 23 of the WIPO Performance and Phonograms Treaty – WPPT (Geneva, 1996).* It is critical to note that the Rome Convention is not in force in India\(^ {20}\), and that India is not a party to either the WCT\(^ {21}\) or the WPPT\(^ {22}\), and therefore, this provision would have the effect of substantially surpassing all obligations that India has at the moment under multilateral international agreements.

**Technical Protection Measures (TPMs) and Digital Rights Management (DRM)**

A TPM, understood simply, is a lock in a digital format, placed on digital material to prevent access to or copying of the material in question. The problem with such measures is that they can prevent even those forms of copying which are legal (for instance, the copying of a movie on which copyright has expired could be prevented), creating a potentially infinite monopoly over the product in question. India, in its negotiations with the EU, has agreed to sweeping language under this provision, where TPMs and DRM measures are broadly defined.

The Agreement further provides for limitations on TPM protections only to persons who have “legal access to the protected work or subject matter”.23

Copyright Expansion

There are various provisions under the proposed FTA that have the effect of copyright expansion. To begin with, the duration of protection for photographic works is not expressly mentioned in the proposed agreement.24 Snehashish Ghosh concludes that the term of photographic works is unclear in the proposed FTA. He writes that the proposed FTA makes it mandatory for the parties to comply with the Berne Convention, and all literary and artistic work under the proposed FTA is to be construed as the same as the Berne Convention25. Photographic works are included under literary and artistic works under the Berne Convention, and the rights of an author in case of photographic works are protected for a minimum period of 25 years. However, the proposed FTA extends the period of protection to beyond that prescribed by the Berne Convention and states that protection is given to literary and artistic works (as defined in the Berne Convention) for a period of the duration of the life of the author plus fifty years after this death. It further states that works for which the period of protection is not calculated from the death of the author, and which have not been lawfully made available to the public within at least 50 years from their creation, the protection shall terminate.26

Article 7.6 (proposed by the EU), limits the resale rights of a downstream purchaser. It has been noted by Knowledge Ecology International27 that this seems to give the author of an original work of art a right in perpetuity, to receive a royalty for the resale of the piece of art, where such right cannot be waived or transferred by the author of the work. Therefore, a situation would arise where each time a person who has purchased the work wants to resell the same, he would have to pay royalties to the original author.28 The observations further go on to note that royalties are not limited, and the amount has to be determined by national legislation. Further complicating the situation is the fact that the provision does not cease to apply after a

27. Supra note 12.
28. Supra note 12.
given number of re-sales, and continues to the death of the author (but might not into the 50 year protection post the death of the author).  

Exceptions and limitations for copyright have been covered under Article 7.9(1) of the proposed FTA, and they may be created “only” in accordance with the three step test, which is essentially that (a) the exceptions and limitations must apply in certain special cases; (b) must not be in conflict with the normal course of exploitation of the subject matter in question and (c) must not unreasonably prejudice the legitimate interests of the right holders. It has been observed that this test is more restrictive than TRIPS, Berne Convention, Rome Convention or the WCT.

On the plus side, temporary copies have been excluded from copyright protection, as per Article 7.9(2) of the proposed FTA, which would ensure the proper functioning of technology.

**Persons with Disabilities**

There is nothing that deals with the import/export or cross border exchange of files/documents/books etc. for persons with disabilities.

**Cross Border Measures**

Cross Border Measures have been dealt with under Article 30 of the proposed FTA. It is interesting to note that under this Article the EU has proposed the application of border measures to exports as well. This is contrary to the position laid down in the TRIPS Agreement, which has this requirement only for importing infringing goods. Further, the EU also seeks to expand the applicability of such measures to include those goods which also infringe designs or geographical indications. Additionally, Article 30 also leaves out certain TRIPS safeguards, for instance, one that requires the right holder to provide adequate evidence for a prima facie case of infringement.

33. Supra note 12.
**Intermediary Liability**

It has been suggested that the EU, under the garb of protecting intermediate service providers from liability for infringement by users, is purporting to place a greater burden on the providers in question, of policing user activity.\(^{34}\) For instance under Article 35.1.1 of the proposed FTA, while service providers are not under any general obligation to seek facts or circumstances that could indicate illegal activity, they may be obligated to promptly inform competent authorities of these alleged illegal activities undertaken/information provided by recipients of their service.\(^{35}\) Otherwise, the providers may also be required to communicate to the authorities, on their request, information that would enable the identification of their service with whom they have storage agreements, as per Article 35.1.2.\(^{36}\) It has been rightly identified by *Glover Wright*, that such provisions would only serve to increase tensions between the users and their service providers, with relations dictated by concerns about liability, and barriers in the sending, receiving and storing of information freely. It would be a tricky question for intermediate service providers to check what would constitute ‘knowledge’ and how they were to best safeguard themselves from liability.\(^{37}\) Therefore, the author is inclined to agree with *Wright’s* submission that India needs to reject all provisions of liability of intermediate service providers as discussed above.

**IP Enforcement**

There exist, as regards the enforcement of rights, many problematic provisions in the proposed FTA. For starters, the EU has proposed that interlocutory injunctions may also be issued under the same conditions against an intermediary whose services are being used by a third party to infringe intellectual property rights.\(^{38}\) This may be found under Article 22.1 of the proposed FTA, and is inherently problematic for being a provision far beyond the mandate as laid down by TRIPS.

---

34. See Article 35 of the Proposed FTA.
36. Id.
37. Id.
The EU is also pushing for the use of very explicit language as regards seizing movable and immovable property of the alleged infringer as a precautionary measure. This also extends to the blocking of the bank accounts and other assets of the said infringer, and to this end, competent authorities may even order the communication of bank, financial or commercial documents, or access to the said information.\(^{39}\) It is critical to note that such a provision is greatly problematic as being rather vague in its approach, and very readily compromising privacy for ‘alleged’ acts of infringement.

It is further critical to note that while Article 20 states that courts should have the power to grant ex parte order to collect evidence that is allegedly infringing, there are no safeguards provided for protection of a bona fide defendant whose premises might have been raided wrongly. It is submitted that provisions that safeguard the interests of defendants are of prime importance, especially in the Indian set up, where courts are as it is rather generous in their granting of ex parte orders.

**CONCLUDING OBSERVATIONS**

While India may stand to benefit from the proposed FTA with the EU, there remain significant IP related issues that need to be ironed out before India comes to any consensus about the agreement and ratifies the same. On the basis of the discussion over the course of this paper, it may be seen that the provisions on intellectual property rights are problematic on various levels, particularly in the areas of expansion of copyright, the inclusion of TRIPS plus provisions, cross border measures, TPMs, liability of service providers and enforcement mechanisms.

Discussions in the first half of this paper have demonstrated that increased IP protections do not necessarily translate into increased FDI and may in fact stifle innovation. Further, the warning to developing countries against adopting IPR standards fixed by developed nations has been sounded many times over, and is one that needs to be heeded to very closely for developing nations to achieve their developmental objectives.

India has over a period of time established an IP regime that is consumer friendly. In adopting the proposed FTA in its current form, she risks endangering this regime that has thus

\(^{39}\) See Article 22.3 of the proposed FTA.
far been instrumental in proliferating emerging technologies in the county.\textsuperscript{40} Given that India has already acceded to international standards for IPRs as a result of being a member of the WTO and being TRIPS compliant, there is no cogent reason to be made out that warrants the accession to an FTA with TRIPS plus provisions. India ought to continue to push back strongly on these fronts, bearing in mind that its stance could very well set the tone for other such agreements in South Asia. From the way things stand at the moment, it is indeed a matter of some relief that the ratification of this proposed FTA still appears to be at a considerable distance.
