Report August 2016

This is a progress report for the NVDA project in the month of August 2016. The development work is going on in the screen reader NVDA.

Trainings are also conducted to spread awareness about NVDA.

NVDA section

The following issues were worked on in the month of August 2016:

Bug ID	Description	Status
5874	Suggestion: providing a way to add custom labels on web pages on IE will be helpful. Done adding and accessing of custom labels for dynamic URLs. Earlier it was being done for static URLs. Done adding and accessing custom labels for image nodes and form fields. The solution for form fields was working initially also but now the same has been implemented using the same approach that has been used for anchor and image tags. There is an issue due to which wrong keys are being added to the config file when custom label is added while navigating in browse mode. This is because the actual focus is not at the element which the screen reader reads in browse mode. Working on a solution to solve this problem. The test build can be downloaded from the link below: https://www.dropbox.com/s/wa0t88jd5x1sruq/nvda_snapshot_source-in_t5874-1aae748.exe?dl=0	Work is in progress.
Vocalizer TTS	The work is also going on in vocalizer TTS.	Work in progress

Training section:

Following is a short report on the trainings conducted in the month of August 2016:
