The Internet has rewritten the way we work, live, date and even govern. Online activism is a faster, more effective way to get more people to react to an issue than through the street or in a letter to the editor, says Anna Johnny, a freelance journalist in Bangalore.

"When the Internet was in its nascent stage, there was a time when the government would not have the Internet on their radar screen. Now they are obviously restrictive. While their ruling is subjective," says Pranesh Sivaraman, one of the initiators of the Free Binayak Sen Campaign website.

The website has been blocked owing to its illiterate material, the act is arbitrary and unlawful. Activists are crying foul and have started a campaign to protest the sealing of the site. They have been extremely vocal and have been very persistent," says Sivaraman, one of the initiators of the Free Binayak Sen Campaign website.

Online travel journal explores Delhi

Whether you're passing through Delhi on a business trip, visiting India with family or here for a vacation, you'll never know what to expect in this myriad city. There are so many different sights to see and experience, from the landmark Red Fort to the vibrant streets of Chandni Chowk.

Several times a week, Sapna Bhatia, a freelance writer and photographer, goes through the city, taking photographs of the city's iconic landmarks and popular eating joints. She delves into slightly more out-of-the-box Delhi experiences, like getting tickets card made, enjoying a Metro ride or exploring Nehru Park and trying out the various foods on offer. According to the website, which is one of the city's top travel destinations, you can learn about the place in a way that is authentic and real.

VANDANA SABHAR

The graphics of Fight Night Champion are the most real. Every detail on the boxes from the way they move to the way their bodies react, is done to perfection.

This game is a total KO

The Binayak Sen and Pink Chaddhi campaigns provide a picture of how fast and efficient online activism is. Initially, the campaign was restricted to a circle of people and work was done on an ad-hoc basis. But it grew beyond our expectations. Between March 19th and May 13th this year, we had 67,000 online visitors to our website. We used the Internet with an efficacy that only online activists, bloggers and techies can do.

"In our eyes, the Internet is freedom. The Internet is freedom. But the Internet won't protect freedom from others. Freedom is subjective," says Pranesh Sivaraman, one of the initiators of the Free Binayak Sen Campaign website.

The new, lightweight Kinect device launched by Microsoft is quickly becoming the most wanted game accessory in the US, and Xbox owners can now easily hook up a video game in the comfort of their own living rooms. With Kinect, users can control games with their voice and movements, making it a perfect addition to any home entertainment system.

With the launch of the Kinect, which is compatible with all Xbox 360 games, Microsoft has taken the gaming industry by storm. The device allows players to interact with games using natural gestures and voice commands, making it a revolutionary step in the world of gaming.

"Microsoft is revolutionizing the gaming industry with the launch of the Kinect. It's a game-changer," said Todd Howard, president of Microsoft Game Studios.

Zircon's Personal Anti-Loss alarm allows parents to keep an eye on their kids even when they are not at home. This device detects when the child moves away from their safe zone and sends a notification to the parents via email or SMS.

Monitor kids with proximity sensor

UK to get new political social network

Kinect sells faster than iPhone & iPad

Researchers at Missouri University of Science and Technology are using the Kinect to record cancerous skin cells, teratomas and teratocarcinomas. This allows them to study the way cancer cells grow and interact with each other, providing valuable insights into the biology of cancer.

"We are very excited about the potential of using the Kinect to study cancer cells," said Dr. Ilse Koch, a researcher at Missouri University of Science and Technology.

"We have been able to observe cancer cells growing in 3D and tracking their movement. This is a significant step forward in our understanding of cancer biology," said Dr. Ilse Koch.

Now, avail postal transaction online

New Delhi: Communications Minister V. S. Sampath today launched the “e-Post Office” – the e-commerce portal of India Post which will provide postal transaction and tracking facilities to customers online.

"Customers can now track their postal transactions online, which will help them avoid long queues at post offices," said the minister.

The new feature will enable customers to track their postal transactions online, which will help them avoid long queues at post offices. Customers can now track their postal transactions online, which will help them avoid long queues at post offices.

"We are happy to launch this new feature, which will provide a convenient and efficient way for customers to track their postal transactions online," said the minister.
