

National Privacy Workshop

DECEMBER 9th 2017 | 10:30 am - 5:00 pm

INDIAN INTERNATIONAL CENTRE

40, Max Mueller Marg, New Delhi - 110003

BACKGROUND

The recent past in India has seen numerous policy developments with wide ranging implications for recognition and governance of privacy in India. The emphatic and unanimous avowal of the right to privacy by the Supreme Court, the government's stated commitment to a data protection law and the formation of the Sri Krishna Committee are developments which will continue to inform policymaking around privacy in India for a long time to come. The Supreme Court's conception of a robust right to privacy encompassing different element - spatial, decisional and informational, and its guidance on strict limiting tests may have a wide impact on a range of issues. The impact of this judgment and a data protection law on informational privacy in India will be immense and it is important to delve in challenges and issues that it may throw up. In last year, we have also seen instances of purported conflict between the transparency instruments such as the right to information and the right to informational privacy. How these conflicts are resolved in law and practice will be key to these two essential human rights in the modern information society. Further, while these general consensus on privacy principles, the appropriate ways to govern and enforce privacy remains an open issue, and the success of any data protection framework will depend as much on what kind of privacy governance models are adopted. This roundtable will look to discuss the potential impact of these policy decisions, what theories should guide the data protection law in India, what models of privacy governance are workable and how privacy can co-exist with transparency principle and robust RTI regime.

AGENDA

10:30 - 11:00 Tea

11:00 - 11:30 Welcome and setting the scene

11:30 - 12:30 Session 1: Policy Developments around Informational Privacy in India
